CMSC
Computer Science [Department Site](#)

Open Seats as of
06/08/2026 at 10:30 PM

CMSC320
(Perm Req)
Introduction to Data Science
[Syllabus Repository \(0\)](#)

★

Credits: 3
Grad.Meth: Reg
Prerequisite: Minimum grade of C- in CMSC216 and CMSC250.
Restriction: Permission of CMNS-Computer Science department.
Credit only granted for: CMSC320, DATA320 or STAT426.
An introduction to the data science pipeline, i.e., the end-to-end process of going from unstructured, messy data to knowledge and actionable insights. Provides a broad overview of several topics including statistical data analysis, basic data mining and machine learning algorithms, large-scale data management, cloud computing, and information visualization.

[Show Sections](#)

CMSC330
(Perm Req)
Organization of Programming Languages
[Syllabus Repository \(0\)](#)

★

Credits: 3
Grad.Meth: Reg
Prerequisite: Minimum grade of C- in CMSC250 and CMSC216.
Restriction: Must be in a major within the CMNS-Computer Science department; or must be in the Computer Science Minor program; or must be in Engineering: Computer program; and Permission of CMSC - Computer Science department.
A study of programming languages, including their syntax, semantics, and implementation. Several different models of languages are discussed, including dynamic, scripting (e.g., Ruby, Python) functional (e.g., OCaml, Haskell, Scheme), and memory safe systems programming (e.g., Rust). Explores language features such as formal syntax, scoping and binding of variables, higher-order programming, typing, and type polymorphism. Introduces finite automata, context free grammar, parsing, lambda calculus, and basics of security attacks and software security.

[Show Sections](#)

CMSC335
(Perm Req)
Web Application Development with JavaScript

[Syllabus Repository \(0\)](#)

Credits: 3

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250.

Restriction: Permission of CMNS-Computer Science Department.

Credit only granted for: CMSC389N or CMSC335.

Formerly: CMSC389N.

Provides an introduction to modern ways of developing Web Applications/Services using JavaScript for both front-end and back-end. The course covers topics on fundamental JavaScript language constructs, server-side JavaScript, back-end data persistence, and client-side JavaScript to build Web Applications that interact with Web services and back-end databases.

[Show Sections](#)

CMSC351

(Perm Req)

Algorithms

[Syllabus Repository \(1\)](#)

Credits: 3

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC250 and CMSC216.

Restriction: Must be in a major within the CMNS-Computer Science department; or must be in Engineering: Computer program; or must be in the Computer Science Minor program; and Permission from the CMSC - Computer Science department.

A systematic study of the complexity of some elementary algorithms related to sorting, graphs and trees, and combinatorics. Algorithms are analyzed using mathematical techniques to solve recurrences and summations.

[Show Sections](#)

CMSC388J

(Perm Req)

Special Topics in Computer Science; Building Secure Web Applications

[Syllabus Repository \(0\)](#)

Credits: 1

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250; and permission of CMNS-Computer Science department.

Explores tools such as Python, Flask, Django, MongoDB, Svelte, and React.

A student-led course through Student-Initiated Courses (STICs) @ UMD: <http://stics.umd.edu/> [Please click here for more information.](#)

[Show Sections](#)

CMSC389A

(Perm Req)

Special Topics in Computer Science; Modern Software Development with GenAI

[Syllabus Repository \(0\)](#)

Credits: 3

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC250 and CMSC216

This course prepares students for the evolving software engineering landscape by teaching them to use AI to boost productivity and build AI-powered applications. Students gain hands-on experience in full-stack development, leveraging AI tools across the software lifecycle from design and coding to testing and cloud deployment while integrating intelligent models such as LLMs and AI agents into their systems. Topics include AI-assisted development (code generation, refactoring, documentation, and agent-based workflows for version control and deployment), building intelligent applications (including RAG pipelines and performance optimization), and core software engineering fundamentals such as version control, architecture, testing, security, UI/UX design, APIs, and cloud deployment. Emphasis is placed on evaluating AI-generated outputs for correctness, security, limitations, and ethical considerations, while using AI to automate testing and quality assurance. Through practical projects, students develop the skills to design and build modern, AI-native software systems.

CMSC389E

(Perm Req)

Special Topics in Computer Science; Digital Logic Design Through Minecraft

[Syllabus Repository \(0\)](#)

Credits: 1

Grad.Meth: Reg

Minimum grade of C- in CMSC216 and CMSC250; and permission of CMNS-Computer Science department.

We will explore the theory and applications of combinational and sequential circuits. All projects will be done using Minecraft Redstone. The course will cover basic gates to more advanced circuits including memory gates and large sequential circuits.

[Show Sections](#)

CMSC389L

(Perm Req)

Special Topics in Computer Science; Reinforcement Learning

[Syllabus Repository \(0\)](#)

Credits: 1

Grad Meth: Reg

Minimum grade of C- in CMSC216, CMSC250, CMSC320; MATH241, 1 course with a minimum grade of C- from (MATH240, MATH461); and permission of CMNS-Computer Science department.

This course provides a comprehensive introduction to reinforcement learning. We begin with a review of key concepts in machine learning and planning, such as gradient descent and neural networks. We then explore core reinforcement learning algorithms including value-based, policy-gradient, and actor-critic methods along with essential tools like TensorFlow and Gymnasium. The course focuses on applications in robotics and autonomous systems, finance, and games.

CMSC389O

(Perm Req)

Special Topics in Computer Science; The Coding Interview

[Syllabus Repository \(0\)](#)

Credits: 1

Grad Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250; and permission of CMNS-Computer Science department.

Technical interviewing is a critical skill for acquiring internships and jobs. Students will gain a comprehensive, practical introduction to technical interviews. Students will be introduced to basic topics such as Big O and String Manipulation and later move into more complex topics such as Graphs and Dynamic Programming. Most in-class time will be spent on mock interviews to give real interview practice. The course facilitators are experienced in interviewing and have received internship/job offers from companies like Meta, Optiver, Bloomberg, Amazon, Apple, Microsoft, Databricks, Capital One, and more.

CMSC389P

(Perm Req)

Special Topics in Computer Science; Mastering the PM Interview

[Syllabus Repository \(0\)](#)

Credits: 1

Grad Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250; and permission of CMNS-Computer Science department.

Prepares students for PM interviews in the technology industry. The class will be a combination of lectures and in-class activities that will provide hands-on practice for PM roles. We will begin with interview questions involving behavioral and technical concepts, and transition to more complex PM-specific topics including product design, analytical, and case questions.

CMSC396H

(Perm Req)

Computer Science Honors Seminar

[Syllabus Repository \(0\)](#)

Credits: 1

Grad Meth: Reg

Prerequisite: Must have admission into Computer Science Departmental Honors Program.

Restriction: Permission of CMNS-Computer Science department.

Overview of computer science research activities, techniques, and tools. Diverse research areas will be covered, including systems, networks, artificial intelligence, human-computer interaction, software engineering, graphics, vision, and theory.

[Show Sections](#)

CMSC398L

(Perm Req)

Special Topics in Computer Science; Introduction to Competitive Programming

[Syllabus Repository \(0\)](#)

Credits: 1

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250; and permission of CMNS-Computer Science department.

Covers most of the basic techniques and algorithms that are used in competitive programming. Topics include C++ STL, greedy, dynamic programming, divide and conquer, graph algorithms, and data structures. Students will learn different algorithmic techniques and apply these concepts to solve interesting programming problems in practice.

CMSC398M

(Perm Req)

Special Topics in Computer Science; Introduction to Product Design with Figma

[Syllabus Repository \(0\)](#)

Credits: 1

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250 or permission of instructor; and permission of CMNS-Computer Science department.

An exploration into the world of Figma! Figma is a popular collaborative design tool used by many developers for brainstorming, proof of concepts, and website/application design. We will be exploring the various capabilities of Figma, and how we can create a website or mobile application from a design made on Figma. Students will learn principles of design, create mockups, and build their own website/mobile app that will look great for resumes and portfolios.

[Show Sections](#)

CMSC398N

(Perm Req)

Special Topics in Computer Science; Ethics in the Age of AI

[Syllabus Repository \(0\)](#)

Credits: 1

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250 or permission of instructor; and permission of CMNS-Computer Science department. Must not have completed DATA200.

Introduces students to the different aspects of ethics within Computer Science. There will be 14 different topics, each one focusing on a different issue regarding ethics in the tech industry. Students will learn what to do in these situations, understand how these issues impact society, and participate in in-class discussions about these topics. After taking this course students should be able to recognize these issues in the real world and be able to use their knowledge to try and better the field.

CMSC398P

(Perm Req)

Special Topics in Computer Science; Practical Cloud Computing with AWS

[Syllabus Repository \(0\)](#)

Credits: 1

Grad.Meth: Reg

Prerequisite: Minimum grade of C- in CMSC216 and CMSC250; and permission of CMNS-Computer Science department.

This course provides a practical introduction to cloud computing with Amazon Web Services (<https://aws.amazon.com/about-aws/>) (AWS). Students will learn how to build applications using a variety of AWS services, including S3, EC2, Lambda, and ECS. Additionally they will have an exam ready understanding of many services, benefits, and features of AWS. The course will culminate in a final resume-worthy project that will be built, deployed, and demoed.
